# **DIRECTOR'S FOREWORD**

✔ FR STN" initially arose from the need to preserve the Monday/Wednesday/Friday Video Club dis- $\Lambda$ tribution project. MWF was a co-op "store" of the artists' group Colab (Collaborative Projects, Inc.), directed by Alan W. Moore and Michael Carter from 1986-2000, which showed and sold artists' and independent film and video on VHS at consumer prices. As realized at the New Museum, "XFR STN" will also address the wider need for artists' access to media services that preserve creative works currently stored in aging and obsolete audiovisual and digital formats.

The exhibition will produce digitized materials from three distinct repositories: MWF Video Club's collection, which comprises some sixty boxes of diverse moving image materials; the New Museum's own rich archive, which includes documentation of historic public programs and performances; and an incoming and, thus, newly assembled collection of transferred materials from artists within the larger public sphere. Consistent with the dictum "distribution is preservation," the project argues for circulation as a mode of conservation. "XFR STN" will serve as a collection and dissemination point for artist-produced content, as well as acting as a hub for information about these past projects (including production materials and personal recollections). The project is both a pragmatic public service and an activity as metaphor: an opportunity to present a media production process in continuous dynamic transformation.

"XFR STN" is emblematic of the kind of risk-taking, limit-pushing projects that the New Museum has long supported. It enables a unique invitation to artists and, in particular, to the immediate community of artists who live or have lived near the Bowery. To this end, it is pertinent that many of the figures whose work will be digitized and shown via MWF's engagement will also be found in the Bowery Artist Tribute, a series of ongoing interviews that have been collected by the Museum since it relocated to its present site.

"XFR STN" is, truly, an endeavor that requires a village of sorts. Acknowledgments for this project are daunting in their span. In addition to the active and inspiring participation of Alan W. Moore, Taylor Moore, Alexis Bhagat, Andrea Callard, Coleen Fitzgibbon, and other Colab affiliates, Walter Forsberg has been invaluable in every aspect relating to the implementation of the project. As Audio-Visual Conservator of "XFR STN," he ensures the project operates as close to best practice as possible. We are thankful to him and his skilled team of technicians, which includes Rebecca Fraimow, Leeroy Kun Young Kang, Kristin MacDonough, and Bleakley McDowell.

Staff members from throughout the Museum were called upon for both their specialized skills and their untiring enthusiasm for the project. Johanna Burton, Keith Haring Director and Curator of Education and Public Engagement, initiated the project and worked closely with Digital Conservator at Rhizome, Ben Fino-Radin, the New Museum's Digital Archivist, Tara Hart, and Associate Director of Education, Jen Song, on all aspects. Providing immense expertise and generosity of spirit, Doron Ben-Avraham, IT Manager, and Brian Traister, IT - AV Administrator, were crucial to the realization of the project and added immensely to the surrounding dialogues. Joshua Edwards, Director of Exhibitions Management, Walsh Hansen, Chief Preparator, Kelsey Womack, Exhibitions Assistant, and Derya Golpinar, Associate Registrar, all worked together to manage a complicated set of criteria. Sarah Stephenson, Editor and Publications Coordinator, and Chelsea Amato, Graphic Designer and Production Manager, were crucial in producing a rich array of accompanying mediation materials for the show. Ethan Swan, Bowery Artist Tribute Coordinator, first brought the project to the Museum's attention, for which we feel particularly appreciative.

We are also very grateful to the funders who have provided support for this program. Generous endowment support for Education is provided by the Rockefeller Brothers Fund, the Skadden, Arps Education Programs Fund, and the William Randolph Hearst Endowed Fund for Education Programs at the New Museum.

Education and public programs are made possible by a generous grant from Goldman Sachs Gives at the recommendation of David B. Heller & Hermine Riegerl Heller.

# "XFR STN": 3 FAQS

# WHY "XFR STN"?

"XFR STN" began with a proposal to the New Museum from Alan W. Moore, who, in the spirit of his practice (Moore is a founding member of Colab), was looking for a partner. Described as an artistic project as well as a public service, "XFR STN" was conceived by Moore to address a specific context-some eight hundred videotapes in a storage bin in Staten Island, amassed during the life of the Monday/Wednesday/Friday Video Club (MWF)-but also a general condition. Significant amounts of the past four decades of artistic production are trapped on obsolete storage media (from U-Matic tapes to floppy disks). For many artists, the cost of digitization and recovery of this obsolete media is prohibitive. Museums and other art institutions are also faced with tough choices around preservation: which artworks to prioritize, and even more urgent, perhaps, how to ensure that works by less- or not-known artists don't continue to disappear with the format that they live on. In other words: how to preserve the possibility of discovering works, especially those contained in obsolete formats, that are not already written into versions of the canon?

"XFR STN," an Education Department project and exhibition spanning eight weeks and housed in the New Museum's Fifth Floor gallery, will be a fully functioning lab with three transfer stations (two dedicated to moving image formats and one to born-digital materials). Trained technicians will work during Museum hours to digitize materials from three repositories: MWF's cache of tapes, the New Museum's rich institutional archives, and the public's holdings of their own art-associated production. This third category—which acknowledges the breadth and depth of the artistic community in New York-will produce an archive at once chance-driven and yet, we suspect, revelatory. In a sense, "XFR STN" might be described as looking closely at recent history in order to negotiate the present, perhaps even the future.

While cognizant that this is an exhibition that necessarily assesses technological shifts over the last forty years-to say nothing of giving a glimpse of the art world during that time-the project is unabashedly educational. "XFR STN" begins at the New Museum but its success will hinge on whether and how it initiates conversations that open up further and elsewhere. Emphasizing the exchanges that will happen around materials as they are transferred (producing, in the process, new data of many kinds), "XFR STN" enables questions beyond the immediate tasks at hand. Indeed, beginning from the early days of planning the project, everyone involved felt

the many complexities-philosophical, technical, and artisticthat began to emerge. We are, as visitors to and participants in the project, called to reflect on what it means to engage in producing more content, even while simultaneously retrieving something from the past. On a conceptual level, these are questions that address a cultural climate that would seem hardly lacking in freely circulating images and information. On a practical level, these are questions that necessarily ask us to re-evaluate practices and principles of production as artists and protection as institutions.

### **WHY THE INTERNET ARCHIVE?**

The act of digitization or data recovery itself is not preservation, but only the first step in a responsible plan. Once an artist's work has been recovered from obsolete media-be it a VHS cassette or a 5.25-inch floppy disk—these bits must now be inscribed on a new storage medium. The spinning disk of a hard drive is a tenuous and temporary data carrier. If artists left "XFR STN" with nothing more than their recovered materials stored on a portable hard drive, we would truly be doing them a disservice. We would fail to meet digital preservation best practices by storing culturally and personally valuable content on an unstable carrier, and not providing any sort of redundancy or duplication. However, it would not be feasible or sustainable over the long-term for the New Museum to take on the responsibility of storing the terabytes of data that will be produced as a result of "XFR STN." As a solution, the New Museum has partnered with the Internet Archive to make all materials recovered as part of the exhibition available to the public. Subscribing to the dictum that Lots of Copies Keeps Stuff Safe,<sup>1</sup> we embrace the notion that distribution itself is a preservation strategy.

The Internet Archive is a nonprofit institution whose mission is "free and open access to the entire world's knowledge," and whose purposes provide permanent access for researchers, historians, scholars, people with disabilities, and the general public to historical collections that exist in digital format. It is a veritable Noah's Ark for digital and digitized cultural heritage. The Internet Archive's storage infrastructure is both vast and stable, and there is no other such "no questions asked" preservation-minded institution that embraces the unbiased collection, storage, and preservation of cultural heritage ephemera. By partnering with the Internet Archive, we are placing digitized artist materials in a massive data center whose primary mandate is preservation, access, and distribution unencumbered by commercial models. The New Museum will be sharing all uncompressed preservation masters produced it necessary to call upon friends and colleagues to help tease out during "XFR STN" with the Internet Archive. The Internet

preservation masters, but will additionally transcode and provide streaming access to all materials. Videos can easily and always be streamed on the Internet Archive's website, archive.org. By partnering with the Internet Archive, we propose a strategy that offers not only a stable home for these at-risk materials, but an effective distribution platform.

In sum, we find this open sharing and partnership with the Internet Archive to be the most effective means of mitigating the very real challenge of providing long-term or archival digital storage to massive quantities of material that, outside the context of "XFR STN," may not find their way to collecting institutions before degrading entirely.

### **3 WHY THE NEW MUSEUM?**

"The New Museum of Contemporary Art was founded on the premise that works of art are not only objects for visual delectation and assessment, but are repositories for ideas that reverberate in the larger context of our culture."

–Brian Wallis, New Museum Curator, 1984<sup>2</sup>

Founded in 1977, the New Museum was conceived as a center for exhibitions, information, and documentation about living artists from around the world. As the only major New York City museum dedicated to contemporary art, the idea was always a contentious one. Questioning the standards of tradition, permanence, and connoisseurship generally associated with museum collections, the New Museum's stated mission was "to provide a forum for contemporary art, especially work that has received little or no public exposure or critical attention, or that might otherwise be inaccessible to a broad-based audience; to share new issues that are constantly raised in current artistic inquiry; and to challenge the context of historical precedent and museum practice."<sup>3</sup> This early mission aimed to support recent art made by less established artists through exhibitions, events, interpretation, and documentation.

One of the most radical innovations was the Museum's approach to collecting. In 1978, the New Museum initiated a "Semi-Permanent" collection policy that allowed the Museum to critically examine and deaccession works from its collection after ten years to make room for new additions-though the idea was never successfully implemented. In 1995, the initial collection policy was revisited and re-evaluated in the exhibition "Temporarily Possessed: The Semi-Permanent Collection." Seventeen years after the concept of

Archive will not only provide permanent public download of these a semipermanent collection was introduced, the exhibition's organizers recognized, "If contemporary art making is often formulated in radical opposition to tradition, lack of access to the past also places limits on the meaning of the present."<sup>4</sup> The semipermanent collection policy was officially frozen in 1997. Over the years, the Museum's approach to history and collecting has considered how its own institutional past might inform its current program.

> Containing documentation of ideas in the form of images, text, audio, and other media culled from the New Museum's rich history of public programs, the New Museum's Digital Archive is particularly concerned with providing evidence of "ephemeral" events and time-based practices that resist traditional modes of documentation. At the same time, the Digital Archive, with its apparently "immaterial" nature, is anchored within the material reality of boxes, folders, videocassettes, cloud storage linked to data centers, and other new and old technology. The common characterization of digital archives as "immaterial" frames them in opposition to the analog. Resisting this limited dualism of old/new, analog/digital, closed/open, we might instead conceive of the New Museum's Digital Archive as aiming to expand the reach of "traditional" cultural objects, by increasing their preservation, reproduction, distribution, and use.

> In the catalogue for "Temporarily Possessed," New Museum curator Alice Yang posited, "How does one maintain the forward trajectory towards innovation without rendering an absolute rupture between the old and the new and losing sight of the histories that contextualize recent developments?"5 Today we ask: How do we represent and activate the Museum's history in light of its present? How do we remobilize or criticize particular histories? As the archive is made available online, questions remain regarding how the archive itself may be reinterpreted in a contemporary context. How do we make decisions about what to make available online? How do we address the distinctive features of such different forms of access?

> These are questions we attempt to face head-on with the intricacies of a project like "XFR STN."

### COPYING VIDEOTAPE IS ARCANE

**T** ucas Hilderbrand's 2009 book, *Inherent Vice*, excavates the illicit nature of videotape Loopy-making and traces the practice of bootlegging, suggesting that the resulting signal degeneration of videotape copy-making reflects an "aesthetics of access."<sup>1</sup> While Hilderbrand posits that each videocassette transfer becomes a singular and fetishized text, the clandestine nature of videotape copy-making practices he points to is far more pertinent to this exhibition's contrarian approach. Secretive duplication extended beyond illegal bootlegging universes, echoing in dominions of commercial dubbing, industrial mastering, television production, and home off-air taping. While copy-making of tapes may have been ultimately aimed at their eventual exhibition, the act of transferring tape and making video copies can generally be understood as a historically private, concealed, and arcane activity.

The home entertainment market commoditized videotape for over two decades, principally through the VHS format. Yet, practically and technically how those billions of linear tape feet were magnetically encoded with moving images remained a complete mystery to most of the public. The technology for recording electricity signals that can represent moving images via videotape is complex. And, unlike film, videotape's black binder hides the logic of its information transmission. Consumers bought copies of their favorite movies, completely unaware of the existence of thousands of daisy-chained VCR rigs or highspeed anhysteretic contact dubbing Sony Sprinters at large commercial duplicators like Rank Video Service or Magnetech Corp. While the mystification of labor may have played a role in this functional ignorance, did anyone really care how the millions of VHS-dubbed minutes of Forrest Gump were created to fill Blockbuster's shelves?<sup>2</sup>

In the bygone era of amateur "taper" cultures, too, videotape copy-making was done behind closed doors-by home enthusiasts or enterprising copyright infringers. Off-air taped compilations of network soaps or wacky cable-access shows, in addition to bootlegs of contraband classics like Cocksucker Blues or Superstar: the Karen Carpenter Story, were created anonymously and circulated underground. Even the now-defunct "old" Kim's Video was rumored to homebrew their own copies of Monday/Wednesday/Friday Video Club titles, never broadcasting that fact to MWF honcho Alan W. Moore (who nonetheless could figure it out). For love or for gold, making homemade copies generally remained privatewhether for the development of a personal home library, to avert copyright infringement lawsuits, or to simply save the price of a legitimate store-bought copy. At friendly neighborhood PAL-to-NTSC services, similarly, transfer is a backroom activity. At contemporary video preservation vendors, where videotape duplication is offered as a paid service, Instructional insert from Sony half-inch reel-to-reel videotape stock, circa early to this mysterious occlusion exists in climate-controlled, secure, off-site facilities that house mid-1970s towering racks of electronic decks, cabling, and flashing lights. Even in the city's own archives, museums, and libraries that have the sufficient resources, video reformatting stations are situated deep within their fortresses and subbasements, often in nondescript and undisclosed locations.

The reversal of praxis that "XFR STN" provides is one of its most immediately striking aspects. While promising to give new and renewed visibility to hidden caches of material content, "XFR STN" importantly also draws back the veil of video transfer and video technology in a zoological fashion. This seems apt given what Canadian video artist Tom Sherman calls the video medium's inherent "communications potential."<sup>3</sup> As a project of the New Museum's Education Department, here, on the pedestal of the open gallery, the public is invited to learn as much about the transfer process as they are to witness it being undertaken and endure the real-time commitment it involves. This fact makes "XFR STN" a very decidedly different operation for copying videotapes.

### VIDEO TRANSFER IS EXPENSIVE

The tape-is-dead clairvoyance of Ryan Electronics's fictive technipractices, and store all resultant material through a partnership with the Internet Archive, maintenance costs for legacy videotape collections are pricey enterprise-scale activities, cians is realistically echoed in the conclusion of the 1973 Spaghetti City Video Manual, where where it would be made publicly accessible. In this, "XFR STN" seemed just as wonderfully requisite for investment protection. The costs may be even dearer if an artist insists that the collective Videofreex write, "The best piece of video equipment today may be practian institution repurchase an older work in its new-fangled high-definition "restored" in- cally obsolete next week."<sup>5</sup> Today, this could not be truer. Untold hordes of video artworks stantiation. Or, when an artist insists on antiquated cathode ray tube monitors to display are under threat of becoming locked into physically bulky obsolete formats, forever inac-In the last half-decade, several of New York's major art museums have recognized the their older digitized "tapes," thereby forcing the museum to keep a working inventory of cessible, and destined for use as doorstops or computer monitor risers. (Consider the fate of your own VHS collection.) Yet, the utopian task of transferring "everything" is still in development. Parties within broadcast video and preservation fields have, for years, engaged conservation, and Peter Oleksik's immense achievement-in-progress of digitizing By enabling artists-at-large to sign up for free transfers of their personal archives and in passionate discourse over how exactly to go about preservation. MoMA's mammoth video art canon, are two efforts that immediately come to mind. But work, "XFR STN" joins in the lineage of community media efforts and alleviates the debate persists over the adequacy of various target digital formats, codecs, wrappers, as an institution without a comparable collection or retention policy, the New Museum's financial burden of transferring materials. While the aggregate number of transferring materials. proposal to offer a publicly displayed free media transfer service, open to all, is radical in the "XFR STN" enacts a provocative and proactive get-it-done approach, not dissimilar to the practice and distinct within contemporary modes of video and data preservation. In lieu of material in need of migration, this effort should prove invaluable to those artists wishing model of nonprofit community-based video preservation centers recommended in a 1997 Report of the Librarian of Congress on the state of video preservation.<sup>6</sup>

> The goal of "XFR STN's" free access to newly digitized material also muddies the waters of the complicated art market of editioned moving image works. As media scholar Erika Balsom's research demonstrated at a recent Light Industry lecture, the videotape editioning model that matured in the 1990s did so by echoing a late-nineteenth-century art market rearguard impulse for "reconstructing rarity in a climate of proliferating copies."7 While "XFR STN's" free digitization could be seen as reifying the manufactured value of editioned canonical videos and their "certificates of authenticity," conversely these transfers also publicly de-commodify video work-through free access to digitized material and in circumventing the expensive process of long-term preservation. This can place artists in a strange interstice between the lucrative desire to be collected, albeit with the potential corollary of limited public access to their work, and the innate desire to have their work seen by as many audiences as possible, even if less money enters into the pockets of creators. Here, "XFR STN" complicates marketplace notions of scarcity and value, but moreover the barrel-aged contentious debate over access (making sure that works can be seen) and preservation (making sure that works are ensured longevity, before granting access to

> Tied to the marketplace, the artificial scarcity of moving image editions is understandable, but from a preservation perspective, the logic can be dystopian. (Save for the wonderful promise, perhaps, of employment for those working as media conservators.) Specifcally, this is the case with the common practice of editioning DVDs-the format heir to videotape—whose longevity has been scientifically demonstrated as fractionally that of videotape's.<sup>8</sup> The reality of increasingly shorter media format life spans across the history of moving image carriers (from film, to videotape, to digital and web-based platforms) makes the high value placed on content held on fragile, short-term, and near-dead media formats a paradox.

> This last point reiterates the most undoubtedly important component of "XFR STN": migrating born-digital artists' works trapped on obsolete computer software and hardware. A chronological quandary, these are the most precarious media formats requiring the most immediate care and attention. And as a recognized leading entity in the field of digital and internet art, the New Museum affiliate Rhizome's crack squadron of digital preservation experts come to the exhibition's forefront with an ambitious plan to accommodate migration and emulation of already antiquated materials held on floppy, Jaz, and zip disks, and a host of other computing formats.

### LIFE AND DEATH AND THE DIGITAL SEANCE

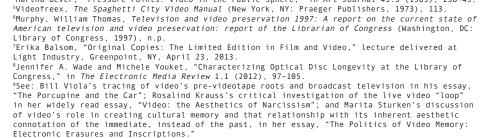

To conclude, I want to return to the morbid hauntological paradigm that Kneale's *The* Stone Tape addresses regarding media formats. Comparing the format obsolescence of all sorts of media to death is hardly a new perspective. The fact that videotape's binder, onto which signal information is magnetically encoded, is made up largely of ferric oxide (aka rust) even technologically invites this viewpoint. And, the fragility of digital supports as replacements for physical tape and film has lead many to suggest that much of what is created today—on the internet and with new digital technology—will ultimately become ost, imposing a "digital dark age" for historians studying our current age.

Having grown up in a funeral home, I often think that I unintentionally followed in my father's footsteps by becoming something of a funeral director for media. Indeed, analogies of death are ripe in this exhibition: arranging appointments with artists to send their material to a final resting place, releasing that material's spirit/signal from its physical bonds, etc. (Videotapes even come with their own coffin-like cases!) But, if critics and artists in he 1970s and '80s pointed to analog video's most distinct ontology as being its immediacy, its capability for real-time transmission, and its "live-ness," then perhaps the best way to understand "XFR STN" is as a life-giving act.<sup>9</sup> "XFR STN's" accessible engagement with now-antiquated technologies through gallery-centric transfer and preservation, via a host of public symposia and panel discussions, and by the porting of artworks to the internet, ultimately stands to ask: How did these works once live, and how can they live on?

It was all free and visible from the street through a plate The parent organization of MWF was Collaborative Projects, aka Colab, a group of some tribe of techno-savvy women. Scenes for this were taped in SoHo and filmed in New Jersey glass window. But the EV's bistro-bound crowd passed by without even looking in.

NYC is a new world it seems, and DIY doesn't seem to cut it. We lost a bundle on the 1st Estate Show" (opened January 1) and the "Times Square Show" that summer. The first, in *Potato Wolf* shared sensibility and some personnel with other artist-run cable TV series, Street shows, but with so little capital and a part-time work ethic, MWF has been able which a group of artists took over a vacant city-owned building in a protest exhibition, most notably "Communications Update," a project run by Liza Béar, and the still extant to persist, even if in a sometimes Frankensteinian state of hibernation. Despite falling excited political artists and led to the formation of the ABC No Rio cultural center in the Paper Tiger Television (PTTV). PTTV also adapted the practice of making live TV and for a Bush-era sales, we may even last out the digital turn. Right now, MWF has gone retro. Lower East Side. In the much vaster "Times Square Show," Colab artists working under while emulated the tacky painted paper look of *Potato Wolf* productions (an aesthetic which We're archiving the more than one thousand tapes that have sedimented from the disteams of artist curators made over a three-story building as a broke-down palace of art and PW artists called "cardboard consciousness") as a backdrop to their critiques of contempo- tribution project, seeking to do our part to save the legacy of the area's recent past. MWF Video Club continues in its dual purpose of dissemination of aesthetic media and informarary media hosted by academics and cultural critics. tion and its preservation.

These were followed by a number of other artist-organized mega-shows in the early '80s. MWF was the last media project of "old Colab" before the membership turned over. As Some were in Brooklyn, like the "Coney Island" show (forerunner of today's "hysterical such, we could consolidate previous years of work for public access cable TV. Much of this society" action) and the Gowanus Memorial Artyard. In the East Village, there was work is included in the MWF catalogue under the category "Artists' Television." Other Alan W. Moore, with editorial assistance by Michael Carter the building-wide "Ninth Street Survival" show at CHARAS, and the "Ralston Farina" artists' cable shows of the period included Glenn O'Brien's late-'70s "TV Party." Hosted July 2003 Memorial" show at CUANDO. All of these big events created small sensations, generated by the *Interview* writer, the show tapped the underground music and club milieu as it popular interest in art that engaged social issues, and networked the NYC art community. shaded into punk and new wave at bars like the Mudd Club. O'Brien's crew included Walter Significantly, they also regularly included artists from the new wave of the graffiti move- Stedding and Chris Stein in the band, and guests Debbie Harry, David Byrne, and Jean-Michel Basquiat.

Graffiti had first been seen in a formal gallery context at the Fashion Moda art space in The Willoughby Sharp Show was a more lavishly produced series, actually funded by the South Bronx. After the "Times Square Show," downtown venues-mainly nightclubs- Manhattan Cable. The show followed the avant-garde curator, journalist, and animavied to show graffiti artists, together with the nascent hip-hop culture of rap and break- teur into the dense cultural mix of mid-'80s nightclubs like Danceteria, Kamikaze, and dance. (Perhaps because of graphic reproducibility, graf artists were then in the lead of the Limelight, and their East Village counterparts Pyramid, 8BC, and Limbo. The show also hip-hop wave.) Charlie Ahearn's indie feature Wild Style (1982), with a climax filmed at the featured clothing and jewelry designers, and art from the second wave of East Village gal-East River park amphitheater, represents the meeting of downtown hipsters and early hip- leries like Civilian Warfare, Piezo Electric, and James Romberger and Marguerite Van Cook's

Colab and its projects had been sustained by funding from state art agencies. Though money contracted in the Reagan years, the MWF venture continued to put something into the While Colab is known as the cauldron of the '80s big show, the group came into being pockets of artists, even if only nickels and dimes. By then, MWF represented work by because of the requirements of media work. Several members had participated as junior once-inimical factions of Colab in its video catalogue. Soon other experimental film- and artists alongside SoHo heavyweights in the satellite broadcast projects of Liza Béar in the video-makers who had worked with Colab were persuaded to pitch their fruits into the late '70s. These newbies were also making Super 8 films, and some started "punking out." pushcart. These included "Erotic Psyche," the neglected mystical erotic work Bradley Eros Diego Cortez moved into the bubbling music scene in the Lower East Side and started did with sequential collaborators Aline Mare and Jean Liotta. While we didn't distribute haunting CBGBs with the star-crossed glamour-puss Anya Phillips. Amos Poe was already much from them, MWF occasionally showed work by the Naked Eye Cinema group, cen-

Though MWF grew out of video art and artists' television, we also sold low-budget "artsy" narrative features, including at first some of the New Cinema productions. The documentary category included performances, readings, and art bands, most local to the East Village and Lower East Side. In addition to its distribution, MWF mounted frequent shows, theme-related video salons at various EV venues-Phil Sanders and Joanna Dawes's RYO, Bert Ball's Art & Commerce Gallery (in the premises; he was gone), Jon Gerstad Gallery on 1st Street, the 2B Gas Station, bOb ("Trailer Trash and Porn" night at ex-Rivington School-hand Jack Vengrow's bar on nearby Eldridge Street), the (old) Knitting Factory, and most recently at the now-defunct Scott Pfaffman Gallery.

In the late '80s, the most popular MWF titles were Nick Zedd's. Nick championed a group of filmmakers he called the Cinema of Transgression in his photocopied zine Underground Film Journal. This group worked in the East Village and was committed to narrative fiction filmmaking in the crowd-pleasing genres of crime, horror, and pornography.

Like the punk rock musicians, the Transgression cinema crowd made underground stars of themselves. Although most were men, the movement included Cassandra Stark and Tessa Hughes-Freeland. Punk singing diva Lydia Lunch spun elegant foul-mouthed rants and won Zedd's heart. His Wild World of Lydia Lunch (1983) is a kind of Super 8 love poem, albeit unrequited. Southern-born filmmaker Richard Kern's humor is callous and direct. His stark and startling short films, cleanly filmed Larry Clarkish vignettes of the low life, featured lots of drugs, guns, and chicks sucking tattooed cock. This led him to a photo gallery career and recent books with the Swiss art and sex publisher Taschen. You Killed Me First (1985), his collaboration with David Wojnarowicz, was shot and shown at Ground Zero on East 10th Street, and features performance artist Karen Finley as Lung Leg's ma (David is her pa). Zedd, crucially influenced by Jack Smith, continues to produce uncompromising hardcore art films. He recently published a picaresque journal of his tortured life, Totem of the Depraved.

MWF's art films and social documentary chart changes and upheaval in the neighborhood over the last twenty years and chronicle its bards, performers, and eclectic denizens. Franck Goldberg's early films exude the harsh realities of the pre-gentrification EV, as in his short piece on the killing of graffiti writer Michael Stewart–mourned by Madonna–by subway police. Phillipe Bonous and Marie Martine's 11th & B was made during the early days of Life Cafe. It's a music video, really, including artists, local characters, and police on horseback during Operation Pressure Point, all cut to soundtracks by Suicide and the False Prophets. Jim C, who ran a gallery near the Rivington School, shot footage of the DIY gallery hubbub and club hijinks, as well as a classic 1984 reading by Miguel Piñero. Arleen Schloss's Art Around the Park (1992) documents a creative and joyous event-the encirclement of beleaguered Tompkins Square Park with paintings during a time of strife around that turf.

MWF has also collected video describing the artistic subculture of Lower East Side squatters and their resistance to gentrification. Clayton Patterson's videos of Tompkins Square during the police riots of 1988 and the Tent City and "Dinkinsville" that sprang up afterward capture key moments in the district's recent past. Goldberg's angry documentary How To Squash a Squat (1990) records the heavy-handed eviction of artists living in city -owned abandoned buildings by NYC police. And Rik Little's Home Invasion documents the climactic violent eviction of the 13th Street squatters in 1996.

# WHEN YOU'RE A JET. YOU'RE A JET ALL THE WAY

ANDREA CALLARD & COLEEN FITZGIBBON

We met in the early days of Collaborative Projects, Inc. (aka Colab) while making and showing art and films. As a group of artists working together, we kicked in small amounts of our own money to make things like X Magazine. We both received individual fellowships from the National Endowment for the Arts and we knew our group could have a bank of art as well as its own money. We developed a way to work together more closely when we became officers Potato Wolf TV show of the group and we pushed Colab toward a democratic structure. We wrote the documents and incorporated Colab as a 501(c)(3), a legal not-for-profit. Richard Savitsky, an entertainment lawyer who also worked for Yoko Ono, was Colab's lawyer. There was enough faith among the group to share seed money and collectively fund projects.

During 1978–79, Colab began a weekly public access cable TV show called the All Color News, broadcasting from Jim Chladek's ETC Studios on 23rd Street. ETC was later renamed Metro-Access Inc. and then became Manhattan Neighborhood Network. Individuals claimed a time slot in advance, then a group would come together to show films from the streets or write scripts and act, videotape, edit, and enjoy the social interaction. The All Color News was the earliest iteration followed by Potato Wolf. Both were live TV, or mixtures of live TV and pre-recorded segments made with Super 8mm film, video, slides, and hand-painted sets. *Red Curtain* followed Sophie Vieille (aka Sophie VDT) in *Cave Girls* by Kiki Smith and Ellen Cooper, 1982 (still). Sound, color, 28 min. Courtesy Colab tures of live TV and pre-recorded segments made with Super 8mm (1979–83), as a way to show more "theatrical" artist films and tapes completed outside the TV studio. As members flowed in and out,  $\blacksquare$ new programs were created and collaboration evolved to include more member artists.

Alan W. Moore, Sophie Vieille, and Michael Carter started the **APPEARANCE...** MWF Club in the mid-'80s with Colab funds to distribute Colab programs. MWF expanded to include many other artists. About ten years ago, we each began archiving and digitizing our own early work. We wondered what happened after the "Times Square The early 1980s were a golden age of public access TV, an era when storage in Staten Island.

At first, archiving seemed like a way to see the content, the context, group. In fact, we found ourselves watching things we had not seen the insouciant, Buddha-simple Blue Bootie, for which some serene times avoided by those who couldn't quite get my act. before and seeing people who came to Colab after us in new, fuller East Villager simply trained his camera out his second-story winways. We had not really known the cast of artist members who later dow on the cute young women passing by on the sidewalk below. # **DIGITAL NEWBORNS**

PHILIP SANDERS & JOANNA DAWE

The history of RYO starts partly as a polemic and partly as an alternative to an alternative.

In the early '80s, when one of us applied for an artist's studio at PS1 with computer art, the application was dismissed with the question, "Aren't computers a part of the military industrial complex?" How was an Apple II, a tape recorder, and a television in a storefront in the East Village, in any remote way, connected to the For me, there is one stepping-stone that stretches as long as the military industrial complex? Misunderstanding, fear, and dislike of

> as well be us. We called the gallery RYO. The name came from the phrase "ryo atari" in the game of Go, a warning to your opponent

from 1984–92. It provided a place where artists who created art and technology could exhibit their work. Experimental work based on n Original Wonder, I videoed myself many times, hoping that an technologies was encouraged and included film, video, computer, ating a place where artists and people in general could investigate interrelated aesthetic, technical, and social issues. It was one of the few places available for artists working with technology to show their work in a dedicated DIY space in the East Village-a mini-Bauhaus with an East Village sensibility. RYO sponsored a number of theme shows and was a center for artists and viewers interested in art and technology. It supported interactive computing art during the field's early development, including programmers, engineers, and artists. It showed inter-media art performance, digital cartoon art, digital and analog processed video, dance, construction, mechanical art, installation....

> RYO was in a half-basement storefront and openings were pretty informal. One time, we made it onto Mr. Sexy's Atomic Hot List, an underground newsletter for EV cognoscenti (put out by Aristides Duval). A bevy of scene lovers showed up at the door, took a look at the fairly funky nature of the place with its black painted tin ceiling and crumbling plaster walls, and paused. Someone took a deep breath, exclaimed "I love it!," and everyone trooped in. They were later convinced that the middle room, a kitchen where an inebriated friend was holding forth from the claw-foot bathtub, was in fact the VIP lounge ....

# CAN'T REPEAT!

FRANZ VILA

Video art was a phrase that referred to the art of artists, mostly in the '80s, who used video as a medium, due to the advent of accessible portable video gear, for expressing themselves and conveying meaning.

I consider video art the charcoal of the digital art era.

The exploratory process was characterized by an interest in the technical potential of hardware, software, and the process alike. The idea was not to do film in video, but to uncork personal and intimate evolutions that made the work look like public voyeurism or an imagination high as though on a psychedelic trip.

Nam June Paik pioneered the manipulation of hardware as a means to obtain visual results not yet reached at the time. I particularly enjoyed his Wobbulator when I was given a residency to do my own work at the Experimental Television Center.

Some, like Juan Downey, devoted their interest to the quality and innovation of the image through editing and processing. While Gary Hill developed very sophisticated interactive pieces of great taste and elegance.

This kind of work found a niche in galleries and museums. But video art, as such, did not. Leo Castelli bought one of my music minidocs, Art on Balloons (1983), in his joint effort with Sonnabendthe only known collection of video art at the time. It ended up in Danceteria, and I was amazed when I saw thousands of people dancing high, drunk, or excited while my piece was blowing their minds even more. Video has remained a frequent ingredient in my artwork–even as a surveillance item, as in a later joint installation with Shalom Gorewitz.

After-hours Monday/Wednesday/Friday Video Club (MWF) was the one establishment to collect the largest variety of video-and not only video art-in all its flavors, and that's how I ended up being one of its members and unconditional supporters.

While partnering with Dieter Froese, who specialized in video installations and fine video processing, I edited three pieces of video that became part of MWF. They are an example of the intimacy and boldness of video art, and my take on the hypocrisy of mainstream sex, where there is a fake division between the privacy of sex and the wide advertisement of porno.

Sex is an animal, mammal, biped human thing—the cling of joy and reproduction. Most people prefer the joy to the reproduction. Therefore, porno is the commercialization of the joy, but the joy itself cannot be criminalized. The crime is punishable, the addiction treatable; sex must be respected.

All of us use our genitals for peeing. Joy comes second, but for many people it is indistinct, and reproduction is last. We pee more often than we beget kids. The joy is political and religions are managers of that department. They penalize sexual joy and try to dismantle it, leaving sex as reproductive and excretory only.

TESSA HUGHES-FREELAND

At the time when Monday/Wednesday/Friday Video Club (MWF) emerged, I was fully committed to programming, making, and writing about film. The New York Film Festival Downtown founded by Ela Troyano and myself in 1984 had become a showcase for the work of many avant-garde and underground filmmakers downtown. These filmmakers were primarily producing short films. A This is not a submission about the *Potato Wolf* series for the "XFR wave of real estate gentrification, which identified one as either

pendent video rental stores. The tapes were usually compilations of several shorts on one VHS tape. VHS had become the domi-A second, lost (original, and only) tape made with Susan Britton nant consumer format over Beta I and II, and transfers were not also had editing suites for rent, with late-night rates available for those who never woke before noon. Before long, the use of these suites transformed from a place to compile films onto one master, to actually being used to edit film that had been transferred straight to tape before editing. An unknown factor then was just how this was the start of a technological snowball whose velocity would change the face of filmmaking and every other method of artistic production imaginable.

> As proposed by Alan W. Moore, MWF was an opportunity to have otherwise hard-to-distribute films distributed. I had just finished Rhonda Goes To Hollywood (1985), which only existed on tape, so this seemed like an idea full of promise. Now, years later, MWF has some rare gems within its catalogue that cannot be found anywhere else. The digitization of these and other pieces will help provide research and exhibition materials of an increasingly obsolete downtown culture.

# COMMUNICATIONS UPDATE

LIZA BÉAR

Communications Update cable TV series, spring 1982 (stills). Segment title: "A Matter of Facts"; written, directed nd produced by Eric Mitchell; in collaboration with Squat heatre, NY, based on their play "Mr Dead & Mrs Free"; executive producer: Liza Béar

JOSEPH NECHVATAL

At the time, I was interested in processing my small scratchy gray drawings through the magnifying lens of reproductive technology and its presentational modes. In 1982, Howard Halle, then curator of the gallery at The Kitchen, arranged for a show there titled after my photomural. For the show, I videotaped this drawing and a few of my other drawings (not moving the fixed camera à la Andy Warhol), and exhibited the videos on various monitors as well as a large projection (which was huge for the time).

Sometime between 1984 and 1986, when I was working with the composer Rhys Chatham on our "XS: The Opera" project, where I used very large projections of drawings for the set, I had the idea to add Chatham's almost static, but intense, Guitar Trio music onto the master videotape. This tape was aired as part of the Colab Potato Wolf cable television series. (The Nechvatal-Chatham collaboration "XS" was presented at the Dannheisser Foundation in 1984.)

*Ovid* is a long puppet show that I staged for a video camera. Using stop-action, I animated the central figure of Lazarus, who I had covered in Xeroxes of my drawings after purchasing him at a Dominican voodoo magic shop downstairs from me on Ludlow Street. This Lazarus figure went on to star in many of my large early computer-robotic paintings. I built the sound track for Ovid around Jane Smith's reading of Ovid's epic poem "Metamorphosis." I have gone on to use a bit of the *Ovid* soundtrack in my more recent audio work "viral symphOny" (2006–08).

All of the video sections on When Things Get Rough on Easy Street, Ovid, and other shorts were produced (and reproduced) in a certain context of collaborative distribution idealism. Myself, and many other artists, were interested in the distributive capacity of art based in reproduction, inspired by a 1968 essay "The Dematerialization of Art" by John Chandler and Lucy R. Lippard, which argued that Conceptualism had a politically transformative aspect. The other inescapable text at the time was "The Work of Art in the Age of Mechanical Reproduction," by Walter Benjamin. My interest in Colab's Fluxus-like low-priced multiples (the A. Moore Stores and the Artists Direct Mail Catalogue), newsprint publishing (X Motion Picture Magazine, Spanner, and the later independent *Bomb*), No Wave film production and screening, video and cable TV (Potato Wolf and MWF Video Club), and audiocassette publishing (Tellus Audio Cassette Magazine) came from my belief in the capacity of politically charged collaborative distribution ideas.

# **ANXIETY AT THE "PLAY"** BUTTON

NEIL ZUSMAN

A Fusion Arts Presentation, Time Witness (both 1986). Is this the stuff I wanted to forget? Old and dull and slow? It's the stuff I've forgotten anyway. This was once my life. I can only listen and watch my old releases when I unpack them from the shelves I've kept them on in the sixteen places I've lived in since 1977.

Moving boxes of video, audiotapes, floppies, and cassettes up and down stairs, twice on sixth-floor walkups, all because I knew they might rot unless shelved. They were once my life. I am the procrastination artist-a suspected hoarder. I'll probably rework *Time* Witness, but that's what I said twenty-seven years ago! I'm glad I of the 1986 Fusion Show on Rivington Street because he needed it. handed Shalom Neuman the tape I had shot (and edited in-camera) But I didn't even remember that I had recorded it.

"XFR STN" is a great idea, but I get superstitious around my own transfers. I'm just getting started in 2013. You need to be lucky. I've learned what I can about the process. I paid Bill Seery of Standby to bake one of my twenty-minute U-Matics because I didn't think I could do it and I still don't know if it's survived. (Come on Bill!) One of the performers I worked with in that 1986 videotape hasn't survived. During my transfer process, I'll go through the many rituals of cleaning and setting up because I know I may only get one pass at running the tape through the machine before the mechanism tears it up or leaves it in an unplayable state. How best to calibrate? Even though the deck was just working, I always run a test tape at the start of each session just in case the deck is suddenly going to chew things up.

I love the frozen snow, the analog sounds I put on tape. Why did I hit the record button when I did? What was I thinking then and **1987–2003** can I honor those thoughts now with digital formats and maturity? Alan W. Moore thinks we all ought to have the opportunity to see MICHAEL CARTER what we set out to do. Thanks Alan. Mind-boggling.

# SPIRAL VIDEO: MWF AND THE EAST VILLAGE UNDERGROUND.

My involvement with the Monday/Wednesday/Friday Video Club (MWF) dates from about 1987 or '88. I knew Alan W. Moore from his brief tenure as art editor of the East Village Eye, to which I had contributed a couple of articles-most notably on David Wojnarowicz's painting exhibition at Gracie Mansion in 1986-and less directly rom his involvement with ABC No Rio and Colab. As a fledgling performance artist (though my first billing was literally as a "bullshit artist" at Club Armageddon) in the early to mid-'80s, I was part of a burgeoning cadre of club performers who careened nightly Miguel Piñero reading at Magic Gallery, 1984 (still). Courtesy between venues like No Rio and No Se No (both on Rivington Street) in the Lower East Side, and Limbo Lounge and 8BC in the East Village. Later, it was venues like Hotel Amazon and Fusion Arts in the Lower East Side and Darinka, 2B/The Gas Station, and Dixon Place in the East Village. This multifaceted and multidisciplinary **STUFF VS. TALK** group drew upon and freely mixed musical, literary, dance, theater, cabaret, film, and conceptual art performance, and often participated in each other's works and visions. Video documentation of almost all of these artists' works were listed in MWF's distribu–  $\hfill {\sf TERRY}\hfill {\sf MOHRE}$ tion catalogue.

these performers as well as plums, and yes a few stinkers, from the happening on Fridays. For a number of years, Alan W. Moore and overflowing cauldron (cynics might say cesspool) of gallery artists, Sophie Vieille, acting as regular hosts, enlivened a festive gathercomic artists, poets, and fiction writers primarily located in the ing where we smoked, drank, and looked into video matters. East about art, performance, and music for other publications like the else was one to encounter face-to-face occurrences with Mr. Jack Eye and Cover magazine, promoting performance shows at clubs Smith (with talks about his father and growing up in Ohio), beginlike Danceteria and later Hotel Amazon, and fronting the Vacuum ning a thirty-year discussion with Franz Vila about the nature of art Bag, a rock band that crossed over into multimedia performance and image, or wrestling with Nick the Fence about the power we ied groups of artists/performers, including the Rivington School, there to extend a substance we found important. the Cinema of Transgression (whose leading lights were Nick Zedd, Richard Kern, and Tommy Turner), and what would later become Naked Eye Cinema (centered around Kembra Pfahler, Peter Cramer and Jack Waters, and Bradley Eros). As a consequence of these varied involvements, I was also on friendly terms with a number of **RESEARCHING ARTISTS'** video documentarians of these scenes, including David Blair, Jim **TELEVISION** C. [Cornwell], Mitch Corber, Marie Martine, Clayton Patterson, Arleen Schloss, Willoughby Sharp, and others.

n addition to these mostly nocturnal activities (and often nocturnally as well), I worked freelance in what was quickly becoming a lying industry as a typographic proofreader. (Alan also moonlighted in this industry as a typesetter.) Depending on one's perspective, the Tompkins Square riot of August 6–7, 1988, signaled either the high- or low-water point of the Lower East Side. The economy certainly was in the toilet, and it was during that time that I started working for Alan and MWF to fuel my nightly forays into darkness and light. Although Alan was already distributing the Cinema of ransgression anthology and works by a number of these artists or videographers, I was pleased to reach out to many of them with the aim of expanding the MWF catalogue's scope and breadth. I developed new titles (like Turner's and Wojnarowicz's Where Evil Dwells railer [1985], in which I had a bit part), and worked with commercial retail outlets (remember Tower Records and Kim's Video?) and wholesale arteries like Facets in Chicago, and acted as a hands-on attaché to video and visual artists in real time, as well as all-around actotum and fetch.

These activities became more vital after Alan moved the operation o Staten Island, first using his tiny one-room loft on East Houston Street as office and pied-à-terre, and later, after he moved the entire operation to Staten Island [in 1993]. For me, this involved requent, sometimes late night sojourns on the ferry. As with the ypographic industry, this DIY distribution vehicle was eventually outmoded by the internet and the even more DIY means of individual artist's websites and sales portals, and the focus of the MWF project increasingly became the cataloging and preservation of the tapes themselves (some of whose creators were already deceased). *We* also tried to develop and showcase performative expressions of new video technologies at a series of screenings/performances at Scott Pfaffman's storefront gallery in the early 2000s, patterning MWF's involvement with many of these filmmakers, videograohers, and performance artists in general in an outward spiral.

# BENJAMIN OLIN

My PhD dissertation focuses on cable television shows produced by artists in New York City during the 1970s and 1980s. Artists' television constituted an important part of downtown culture, a collaborative mode of art praxis, which involved filmmakers, video artists, performance artists, and poets. This eclectic body of work includes poetry readings, art gallery and nightclub reportage, soap Hallwalls Contemporary Art Center operas featuring Warhol superstars, experimental news bulletins, vaudeville talk shows, inter-media jams, and punk performances.

Despite the recent surge of interest in the cultural life of Lower Manhattan during the 1970s and 1980s, artists' television has persistently evaded historical accounts of the period. Unlike downtown film, this work has rarely been chronicled, exhibited, or archived, and remains largely unavailable outside of private collections. Researching my dissertation has involved scouring the footnotes of histories of underground film and No Wave cinema, examining extant journals such as the *East Village Eye* and *SoHo Weekly News*, and conducting numerous interviews with the artists involved-many of whom have generously loaned me videotapes of the shows.

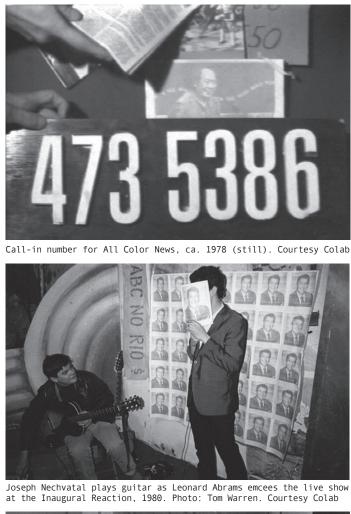

From a contemporary perspective, these broadcasts are reminiscent of "user-generated" online video, reality television, and MTV. And yet, by virtue of being produced and exhibited within a relatively restricted locality, artists' television generated markedly different structures of sociability than contemporary global media networks. The screening of these shows constituted a local media event that occurred in a shared time and place. Few of the artists had cable television-or even TV sets-and viewing parties were regularly held in independent art spaces, nightclubs, and bars.

By digitizing the artists' television shows stored in the MWF Video Club collection, "XFR STN" will render visible a vital aspect of downtown culture. Via the adjacent online platform, these shows will be transferred to the digital media commons, some thirty years since they left the airwaves of public access cable television.

# VIEW FROM A BURNING DECK

SHERRY MILLER HOCKING

In 2013, the state of video preservation remains precarious, despite more than two decades of effort. It is a problem faced by alternative media projects, individual artists, and major museums alike. One can take some hope from the multiple strategies that we have created to digitize obsolete and endangered tapes, relying on the occasional guerrilla preservation tactic. Based in Western NY, Migrating Media is a collaborative project of Hallwalls, Burchfield Penney Art Center, Squeaky Wheel, and ETC, among other groups. The goals are to provide digital preservation services and education programs to media arts collections upstate. Prior to using the service, an organization must demonstrate readiness by cataloging and prioritizing the collection and developing a plan to assure proper storage, regular migration, and, notably, accessibility to the public. ETC has placed our archive at the Rose Goldsen Archive of New Media at Cornell University, with similar goals in mind. Organizations may also take advantage of an exhibition to digitize works as a prerequisite for inclusion. "Wish You Were Here: The Buffalo Avant-Garde in the 1970s" was a large survey exhibition at the Albright–Knox Art Gallery that depended partly on this strategy. ETC took advantage of a special digitization funding opportunity to create a five-DVD set, *Experimental Television Center: 1969-2009*, which provides an overview of the history of image-processed works at ETC. "XFR STN" (Transfer Station), an open-door artistcentered media archiving project, is another model. Regardless of the model employed, it is critical to build avenues of access for individual artists holding personal collections.

Further hope is inspired by the leadership provided by the Association of Moving Image Archivists and Independent Media Arts Preservation, as well as the Standby Program, Bay Area Video Coalition, Video Data Bank, and Electronic Arts Intermix, all of which provide services ranging from information and workshops to distribution as a preservation strategy. Organizations like Hallwalls, Electronic Arts Intermix, and ETC's Video History Project have established searchable archives to present historical documents surrounding the history of media to provide context to the works. Web-based and born-digital works present their own set of problems, which organizations like Rhizome and the New Museum, among many other organizations, are addressing.

Unfortunately, there is still very little financial support for the preservation of electronic moving-image works, and our contemporary cultural understanding and heritage hang in the balance. Preservation is an ongoing process requiring active stewardship involving multiple file copies, proper storage, regular migration with data verification, and the organization of the ephemera surrounding collections to establish accurate context for the works. We must continue to imagine solutions for these problems or the artistic and cultural heritage, which now exists on obsolete video and new media formats, will cease to exist.

<u>NOCTURNES</u> Leslie Lowe And Jack Waters A black and white film inspired by Huysman's decadent novel <u>A Rebours</u>. The music is by Chopin.

Jack Waters and Leslie Lowe. Nocturnes. 1987 (still). Sound. black and white, 10 min. Left to right: Adrian Saich and Brad aylor. A study in black-and-white photography inspired by a passage from A Rebours. Huvsman's nineteenth-century decadent novel. Filmed in the basement of ABC No Rio. With Peter Cramer (credited as Peter Frances), Adrian Saich, Brad Taylor, and Valerie Caris (credited as Contessa Valleé). Courtesy Jack Waters and Allied Productions, Inc.

Peter Cramer. Corrective Measures: Politically Speaking, 1986 (still). Sound, color, 10 min. Photo: Peter Cramer. Courtesy Jack Waters and Allied Productions, Inc.

Generous endowment support is provided by the Rockefeller Brothers Fund, the Skadden, Arps Education Programs Fund, and the William Randolph Hearst Endowed Fund for Education Programs at the New Museum. Education and public programs are made possible by a generous grant from Goldman Sachs Gives at the recommendation of David B. Heller & Hermine Riegerl Heller.

Special thanks to DuArt Restoration for generously providing technical assistance and equipment refurbishing.

The New Museum wishes to extend gratitude to the following individuals and institutions:
